WeBuild Construction Software

What We Offer

WeBuild is an all-in-one, fully integrated, cloud-based construction management platform that brings your entire project lifecycle into one connected system.

It replaces disconnected tools, spreadsheets, and email-heavy workflows with structured processes, centralised data, full audit trail, and real-time visibility.

Core Capabilities

- Tender / Bid Management
- Document Management
- Field Management
- Contract Management
- Quality & Safety
- Dashboards & Reporting

Who We're Built For

WeBuild is purpose-built for **small-to-medium contractors** delivering:

- Commercial projects
- Multi-trade projects

Our Focus

We specialise in contractors who:

- Are outgrowing spreadsheets and stand-alone tools
- Find enterprise platforms too complex or expensive
- Need better structure without adding overheads
- Want visibility across projects without losing flexibility

Why WeBuild Is Different

WeBuild delivers both structure and simplicity, while most systems force a trade-off:

- Standalone tools don't work well together
- Enterprise systems are difficult to implement and use, and can be expensive

Key Differentiators

All-in-One Integrated Platform

No need for multiple systems — everything works together from day one.

Built for SMB Contractors

Designed around real workflows — not enterprise assumptions.

No Upfront Capital Outlay

Simple SaaS model with no heavy implementation costs.

Fast Setup

Teams can get started quickly without IT involvement.

Consistent Office-to-Field Experience

Same system across desktop and mobile — no gaps in information.

Automated Workflows

Templates, alerts, and reminders reduce repetitive admin.

Intuitive User Experience

High adoption across teams without extensive training.

No Login Required for Subcontractors

External stakeholders can engage without friction.

What makes WeBuild different?

All-in-one integrated SaaS construction management system

How WeBuild Helps Your Team

WeBuild improves how your team operates day-to-day.

Better Control

- Structured processes across all contract workflows
- Full audit trails and accountability

Improved Efficiency

- Less manual follow-up
- Faster turnaround on approvals and documentation

Stronger Collaboration

- Centralised communication
- Reduced reliance on email

Real-Time Visibility

- Live dashboards across projects
- Early identification of risks and delays

Scalable Operations

- Standardised workflows across all projects
- Flexible structure that grows with your business

Why It Matters

The right system doesn't just manage projects — it improves how your business runs.

WeBuild helps contractors:

- Replace fragmented workflows with structured processes
- Improve coordination without increasing overhead
- Deliver projects with greater consistency and control

Next Step

We typically enable you to walk through WeBuild using your live project environment so you can see exactly how it works in practice. See next page.

Run a Real Project. Not a Sales Demo.

Start your self-managed demo of WeBuild

Selecting the right construction software is an important business decision. Once adopted, it becomes an **integral part of your daily workflows** — and replacing it later is **highly disruptive**.

Sales demos are typically limited and focus on hypothetical scenarios — so they rarely reflect how a system will perform across your actual projects and day-to-day workflows.

Instead, see how WeBuild performs using one of your own projects — your structure, your data, and your way of working.

No assumptions. No staged scenarios. No sales pitch.

Just a real environment where you can properly evaluate the system.

In under 10 minutes: You will be able to set up your company workspace, create a live project environment and start working with your own data.

Invite your team and let them test their own workflows — so your decision will be based on real input from the people who actually use the software.

Why this approach works better for you

No sales bias — No sales pressure or scripted walkthroughs.

Real validation — With your own projects, not sample data.

Team involvement — Get your team's valuable input.

Informed decision — Know that it fits before committing.

You're in control. No sales calls. No obligation.

Good to Know

Zero risk:

- WeBuild is fully web-based — no installation required
- You won't be charged during your demo period
- No upfront setup costs
- Continue after 14 days only if it works for you

What you get:

- All data you enter is preserved and ready to use if you continue
- Pricing is based on internal users number only — not project value or turnover
- Free access for external collaborators (subcontractors, consultants, etc)
- No WeBuild account/login required for your subcontractors/external partners
- Templates, alerts and reminders to automate repetitive processes
- All project-related emails and forms are branded to your company
- Unlimited project data storage
- Free technical support for your team and collaborators

How to Get Started

Open the link below and follow the instructions to:

1. Create your company account
2. Set up your team
3. Launch your first project

You'll be inside a **fully working environment** in minutes, and your team can start using the system immediately.
